EShield

Aristogene

Phage Formulation for Pathogenic E.coli and Salmonella

THE PRODUCT:

E.coli and Salmonella infections are of great concern in poultry. These bacteria are resistant to antibiotic treatment and result in increased mortality and heavy economic losses. EShield is specially formulated cocktail of bacteriophages that can selectively kill these pathogenic E.coli and Salmonella. The most effective phages have been carefully selected from the phage library and combined to provide complete protection from E.coli and Salmonella infection. This is the best alternative to antibiotics.

PRODUCT SAFETY:

Overdose of >50 times the normal supplement has not shown any adverse effect on the chicken.
Continuous use of the product in the farms has been beneficial.

- Best way to raise antibiotic free chicken-best alternative to antibiotics
- Reduces mortality
- Highly effective in treating and preventing colibacillosis and salmonellosis
- Improves bird and egg quality
- No harm to beneficial bacteria
- Natural, Safe and targeted approach
- Works on antibiotic resistant bacteria where antibiotics fail
