

phAEGIS

Multi-Target Phage Formulation for Control of Bacterial Infections

Aristogene

THE PRODUCT:

phAEGIS is a bacteriophage formulation targeting pathogenic E. coli, Salmonella and Staphylococcus in poultry and other farm animals. It is a carefully selected cocktail of lytic phages that can effectively reduce the load of these bacteria in birds, litter and the hatchery environment.

PRODUCT BENEFITS:

- Targets pathogenic E. coli, Salmonella and Staphylococcus
- Helps in prevention and control of bacterial infections
- No harm to beneficial bacteria
- A natural, safe and targeted approach
- Useful against antibiotic resistant bacteria

DOSAGE:

Birds & Litter (Spraying)	5 g in 10 L of water
Hatching Eggs (Spraying)	20 g in 1 – 1.5 L of water (for ~ 30,000 eggs)

or as directed by veterinarian

STORAGE:

Store in a cool, dry place

Manufactured By:
